

Heartbleed Bug - Parador Websites Unaffected

Published: April 10, 2014

By now you have no doubt heard of the "Heartbleed Bug" throughout the media. This could be the most significant online security exploit in history.

This particular programming flaw has left any websites utilizing OpenSSL (this includes a very extensive list including Yahoo, Facebook, Flickr etc.) open to allow hackers to see information like your credentials or payment information while transmitting to a website, and in some cases, your information stored on these websites.

We are pleased to report all Parador customer websites have been tested and remain unaffected by this latest incident.

If you need a rock-solid website for your business, give us a call today. 416 / 1-800-PAR-ADOR (727-2367) x 2150.
